ScreenSketcher is easy to learn and intuitive to use. You'll be creating excellent mock-ups of your applications and websites in no time. Once you've created something you like, you can print it, share it online, or just save it for yourself. ScreenSketcher can be used to prototype both desktop and web-based interfaces. ScreenSketcher's prototypes are rendered in a "hand-drawn" style. ScreenSketcher's prototypes are created in the standard Windows interface, which doesn't clutter your screen, so you can easily see what you're designing and you won't lose your train of thought if you "accidentally" close your mock-up. Also, due to ScreenSketcher's ability to quickly load objects and link them with one another, you can easily prototype screen-based applications, web sites, utilities, and more without having to open a new sketch every time you want to link elements. ScreenSketcher's menus and toolbars are quickly dragged onto the screen, and can be altered and animated easily. Any changes to one menu or toolbar effect the rest of the mock-up. Another thing that makes ScreenSketcher a revolutionary mock-up tool is that it is automatically saved to your hard disk. This means you can go back and view your prototype at any time, and save changes directly. ScreenSketcher Features: - Intuitive interface: ScreenSketcher is easy to learn and intuitive to use.
